

Sensitivity: Conditioning on Crossing Attempts (Model C, Death Counts)

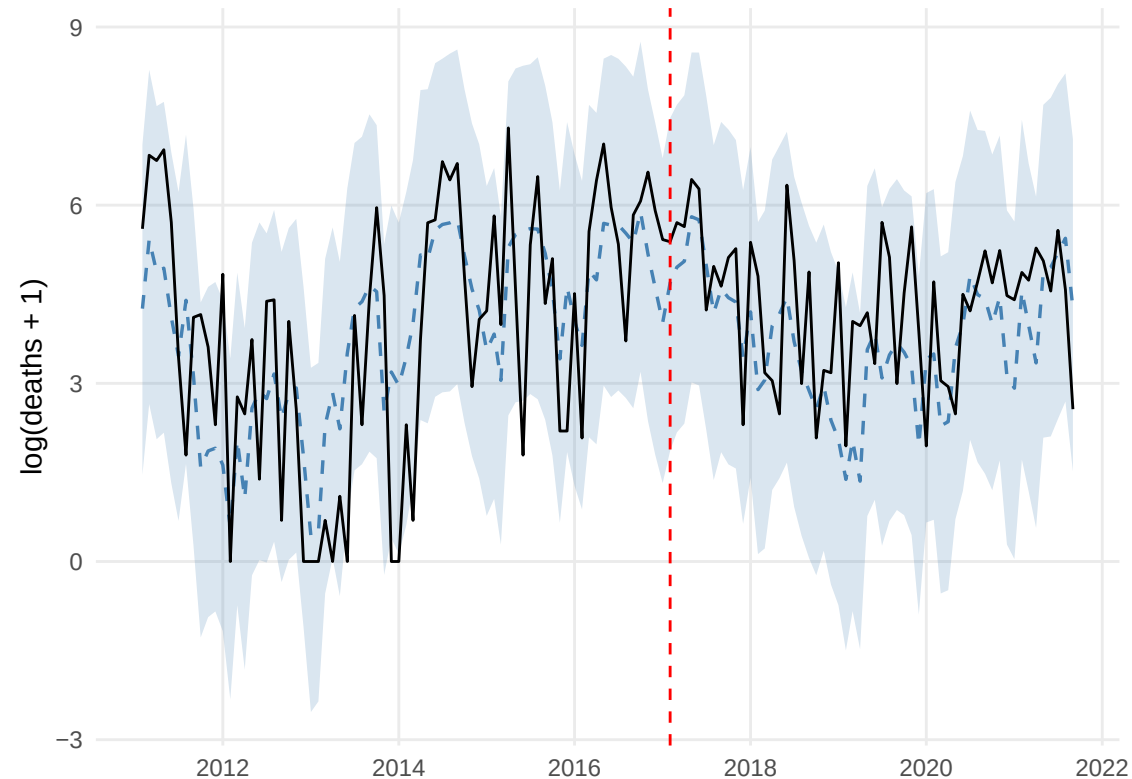

C. Deaths – Original (no crossings covariate)

$p = 0.197$ | Effect: +8.3% | Not significant

C. Deaths – Conditioned on log(crossings)

$p = 0.021$ | Effect: +16.4% | Significant

Red dashed line = MoU (Feb 2017). Black = observed, blue dashed = counterfactual, shaded = 95% CI.
